Pre-Workshop 1:

9/30/2024

1. Download VS Code

    a. Navigate to https://code.visualstudio.com/download

    b. Download the appropriate version according to your operating system

    c. Follow the installation instruction

        i. Keep the default settings

2. Start VS Code and navigate to the extensions tab

    a. The extensions tab should be located on the leftmost panel of the window

    b. It should look like this:

3. Once in the extension tab, get the "Jupyter" extension

    a. Search Jupyter in the search bar at the top of the extensions panel

    b. Click on the first option, it should have the title "Jupyter"

        i. There will be other extensions with the word "Jupyter" in their titles, we want the one that only has the one-word

    c. Click the install button

4. Open the extracted folder from the website using VS Code

    a. If you click the top tab in the leftmost panel of the VS Code window there is an option to open a folder

    b. Open the extracted zip folder downloaded from the website

5. Continue the workshop by following directions on the Jupyter Notebook based on your operating system
